

Cover Letter

To whom it may concern,

I would like to express my interest in joining your Electrical Engineer Talent Pool at UKRI. I am enthusiastic about being part of the connected network of research institutions and industry leaders to further develop the UK's position as a global science hub, by putting it at the forefront of research.

I am eager to work with the best resources and support offered by the UKRI, including industry partners and research associates. I hope to use your growing facilities and equipment to develop cutting-edge electronics using new advances in AI assisted design. My previous experience at CSA Catapult has equipped me well for a position that requires both in-depth research and frequent interaction with industry partners. I have worked with companies such as Element 6 and Microchip.

Additionally, my participation in the Formula Student Team at Lancaster University has given me a deep understanding of the interplay between electrical and mechanical systems and the considerations that are needed for designing a new data collection and interpretation network. Being part of a team of 19 and effectively integrating the data collection requirements of each member requires exceptional listening skills, patience, efficient time management, and a delicate balancing of individual needs.

I am passionate about making a positive impact on those around me and particularly in creating interest in the technology sector among younger students. I have participated in STEM activities such as designing a future Christmas car with many futuristic concepts and demonstrating electronic devices at the Cardiff Science Festival with kids from 8-16 years. I hope to be able to be part of similar activities at UKRI so I can continue to engage younger students with engineering innovations.

I am hopeful that my skills and experience will be a great help to the UKRI team, and I would like an opportunity to further develop my professional skills and contribute to the advancement of the UK research in the field of electronic engineering.

Thank you for considering my application.

With kindest regards,

Andrew Thomas
