

Dr. A. Asadi,
Wireless Communication and Sensing LAB
Faculty of Electrical Engineering, Mathematics & Computer Science
TU Delft

Dear Dr A. Asadi,

It is with great enthusiasm that I recommend Andrew Thomas as your PhD candidate. Andrew joined AccelerComm from August 2023. As a senior engineer of the software team, I had the privilege of observing Andrew's professional growth and remarkable contributions to our team over the past 1.5 years.

Andrew used Google Unit Test Framework to build our unit tests to test all 5G uplink and downlink channels, which proved to be extremely useful. He is very good at programming languages like C, Matlab and Python. He created some Matlab modules for us to develop channel estimation, equalizer and debug timing advance.

Our daily jobs need good understanding of 3GPP specifications of the 5G physical layer. Andrew picked up those knowledge quickly. He contributed a lot to PUCCH and PUSCH channel development particularly. He understands well at L2/L1 interface (FAP) and HiPHY/LowPHY interface (O-RAN).

Andrew is quick to pick up any tasks that we assigned to him. I have mentored many graduate engineers from some top UK universities. Andrew is the best one. He has collaborated well with colleagues to solve hard issues.

Please feel free to contact me for any further information or clarification.

Sincerely,

Shide Wang
Senior Software Engineer, AccelerComm
